

ITTE/MIRANDANET 32ND INTERNATIONAL CONFERENCE

THURSDAY 7TH JUNE - FRIDAY 8TH JUNE, 2018
UNIVERSITY OF WINCHESTER

Raising **aspirations** for **digital education**

Opening Conference Debate

**ENHANCING LEARNING AND TEACHING WITH TECHNOLOGY:
WHICH INNOVATIONS APPEAR TO WORK?**

Journey towards teachers' ownership of the teaching and learning technology

Teaching IT without computers,
Croydon Information Technology programme
1980

Teaching with Computers
Microelectronics programme 1981
TVEI computer network room, Croydon School

Teaching teachers about computers 1987
Teachers involved in product design
With Acorn BBC Micro in Assembler designed 2 adventure games at
Education Computing Unit, Kings College under Margaret Cox
Croydon LEA adviser

Struggling between RM 186PCs and Apple Technology
ILLEC

Not just a load of old Tosh!
Set up the MirandaNet Fellowship
Laptops for teachers, Nottingham University and Becta
Institute of Education, University of London 1992

Dr. Christina Preston,
Associate Professor of
Education
Institute for Education Futures
De Montfort University
christina@mirandanet.ac.uk
07801 336 048

mirandanet.ac.uk

Enhancing Learning and Teaching

- Bob Moy: Developing Tray
- New pathways for Shakespeare
- Adventure games
- Laptops and tablets for teachers
- Laptops and tablets for pupils
- E-books for boys who are reluctant
- Quizzes
- Think.com social networking for pupils
- Homework software that parents can access
- Software that engages parents in their child's progress
- Interactive video
- Animated graphics to teach scientific thought
- Children blogging and creating websites
- The value of virtual reality
- Learning machines. Is this now AI?
- Microphones for teachers and pupils
- **Video based professional development..**

Other reports can be found here

<https://mirandanet.ac.uk/about-associates/associates-research/>

Enhancing teachers' learning

Professor Rose Luckin, London Knowledge Lab, UCL/IOE argues that the final section, 6, is the most important because it highlights the key role that educators play in helping learners to become successful at learning as well as knowledgeable about core curriculum subjects and essential skills. Chapter 6.3 highlights the complex nature of teaching

Teachers have to make difficult decisions 'on the fly' which requires **adaptive metacognition.**

Evidence illustrates that practitioners adaptive metacognition and professional decision-making competencies can be developed. Surely we must therefore invest in the formal frameworks, reflective routines and communities of practice that have been shown to scaffold practitioners to develop these competencies.

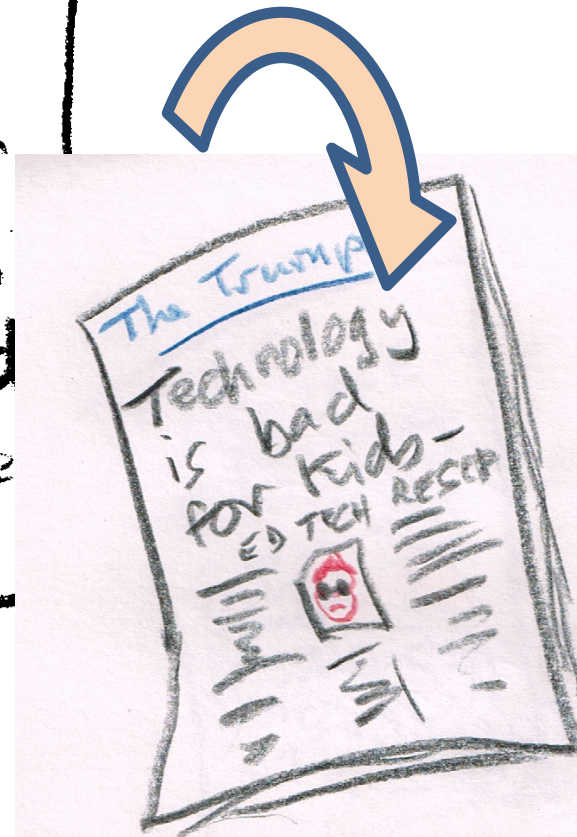

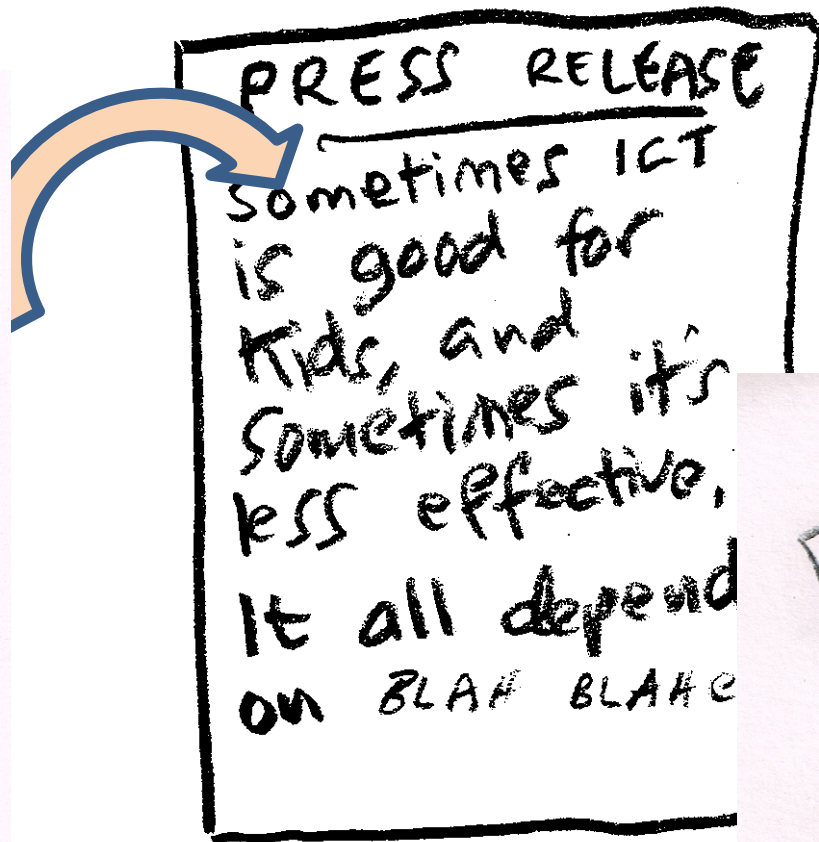

Porayska-Pomsta K., Preston, C., Laerke
Weitze, C. and Younie, S. (2017) 'How can we
provide educational practitioners with the
expertise they need?' In: What the Research
Says, Rose Luckin (ed). Routledge

The challenge: from research to news is a process of taking out details, and so distorting the findings

© 2015 Terry Freedman

How to get the real story

Ideal: read original report

Next best: read Executive
Summary

At a pinch: read the press
release (again)

Terry Freedman

Independent writer, trainer, speaker, consultant

In education since 1975

Digital Education Newsletter: www.ictineducation.org/diged
@terryfreedman

Your role in edtech, key information about your organisation, relevant references

- Advisory Teacher for ICT/SEN and Inclusion in Tower Hamlets
- Author several books
- Consultant for various projects
- “Learning with Handheld and Mobile Technologies” (2015) with John and Mactaggart
- “Harnessing technology for personalised learning and every child matters” (2009)

The challenges that you face

- Bringing a focus onto Person Centred approaches
- Lack of training
- Attitudes to assistive technology
- Trust

The solutions that you suggest

- Implementation of Universal Design for Learning (UDL)
- Time travel
- A system that works for pupils not for itself
- Trust

ITTE/MIRANDANET 32ND
INTERNATIONAL CONFERENCE

THURSDAY 7TH JUNE - FRIDAY 8TH JUNE, 2018
UNIVERSITY OF WINCHESTER

Raising **aspirations** for **digital education**

Debate 1: Thursday 5:15-6:15pm
Enhancing Learning and Teaching with Technology

How AUTOGRAPH can enhance understanding of core principles in mathematics through dynamic visualisation

DOUGLAS BUTLER FIMA

iCT Training Centre, Oundle (UK)
TSM training workshops
Lead Author, *Autograph*

DOUGLAS
BUTLER

ITTE/MIRANDANET 32ND
INTERNATIONAL CONFERENCE

THURSDAY 7TH JUNE - FRIDAY 8TH JUNE, 2018
UNIVERSITY OF WINCHESTER

Raising **aspirations** for **digital education**

1. My role and key information about my organisation

- For the past 25 years I have been running popular 3-day residential workshops and one-day events on “Technology for Secondary Mathematics”
- Developing and supporting the dynamic software “AUTOGRAPH” for KS3-5.
- Regular technology sessions given to many PGCE Mathematics courses

DOUGLAS
BUTLER

2. The challenges that I face

- Mathematics teachers today face a kaleidoscope of digital options that is leading the majority to use none of it. Added to which many open-source titles are quite complicated to use. AUTOGRAPH needs to address this hostile environment.
- The digital environment is shifting from 'mouse and keyboard' to 'touch', and this is a step backwards in the use of dynamic geometry, which needs easy click and drag and multiple selection. AUTOGRAPH is developing an HTML version that overcomes this.
- Mathematics teachers use ICT more intensely than other subjects, so it is vital that any school-wide solution takes this into account – in particular it is quite common, and far from ideal, to force a mathematics department to use only tablets. Also iPads are 4:3 aspect which is incompatible with modern projectors and TVs.

BUTLER

ITTE/MIRANDANET 32ND
INTERNATIONAL CONFERENCE

THURSDAY 7TH JUNE - FRIDAY 8TH JUNE, 2018
UNIVERSITY OF WINCHESTER

Raising **aspirations** for **digital education**

3. Suggested solutions

- AUTOGRAPH has evolved over the past 20 years and developed a user interface that is popular with teachers and students: a simple 'select and right-click' approach
- Important topics can be taught and learnt more efficiently and more effectively using AUTOGRAPH. Efficiently: more examples and can be explored in less time. Effectively: tricky topics such as Histograms and 3D vectors can make a lot more sense with this technology.
- Training is vital. With off-campus training becoming severely limited, CPD has to go online, using videos.

A collaborative book chapter on the development of computational thinking in the Czech Republic and in England

Book chapter title:

“The new Computing curriculum in England”

Mirka Černochová: Assistant Dean, Faculty of Education at Charles University in Prague, Department of Information Technology and Technical Education; member of the Czech Ministry of Education consultative body

Lawrence Williams: former lecturer, PGCE and MA courses at Brunel University London; MirandaNet Council

The challenges that we face

- Training teachers to cope with the new demands of computer science, and of computer coding in particular
- Developing a creative environment for learning coding within a cross curricular, constructionist framework

The solutions that we suggest

- Aligning computational thinking projects with literacy, art and music to encourage **creative engagement**
- Developing **cross-curricular teaching approaches** which include coding in Logo, Scratch, and Python
- Developing **sequencing activities** (“unplugged”) which support coding activities

National Curriculum Timeline

1999/
2000+

Programme of study: information and communication technology

Knowledge, skills and understanding
Finding things out

Developing ideas and making things happen

Exchanging and sharing information

Reviewing, modifying and evaluating work as it progresses

1995

Information technology from 5 to 16
HMI Series: Curriculum Matters No. 15
London: Her Majesty's Stationery Office

1989

Objective (i): Communicating ideas and information

Objectives (ii) and (iii): Information handling

Objective (iv): IT representations of real or imaginary situations and mathematical calculations

Objective (v): The aesthetic aspect of the curriculum

Objective (vi): Designing, making, measuring and controlling in the physical environment

Objective (vii): Some consequences of IT for society and the individual

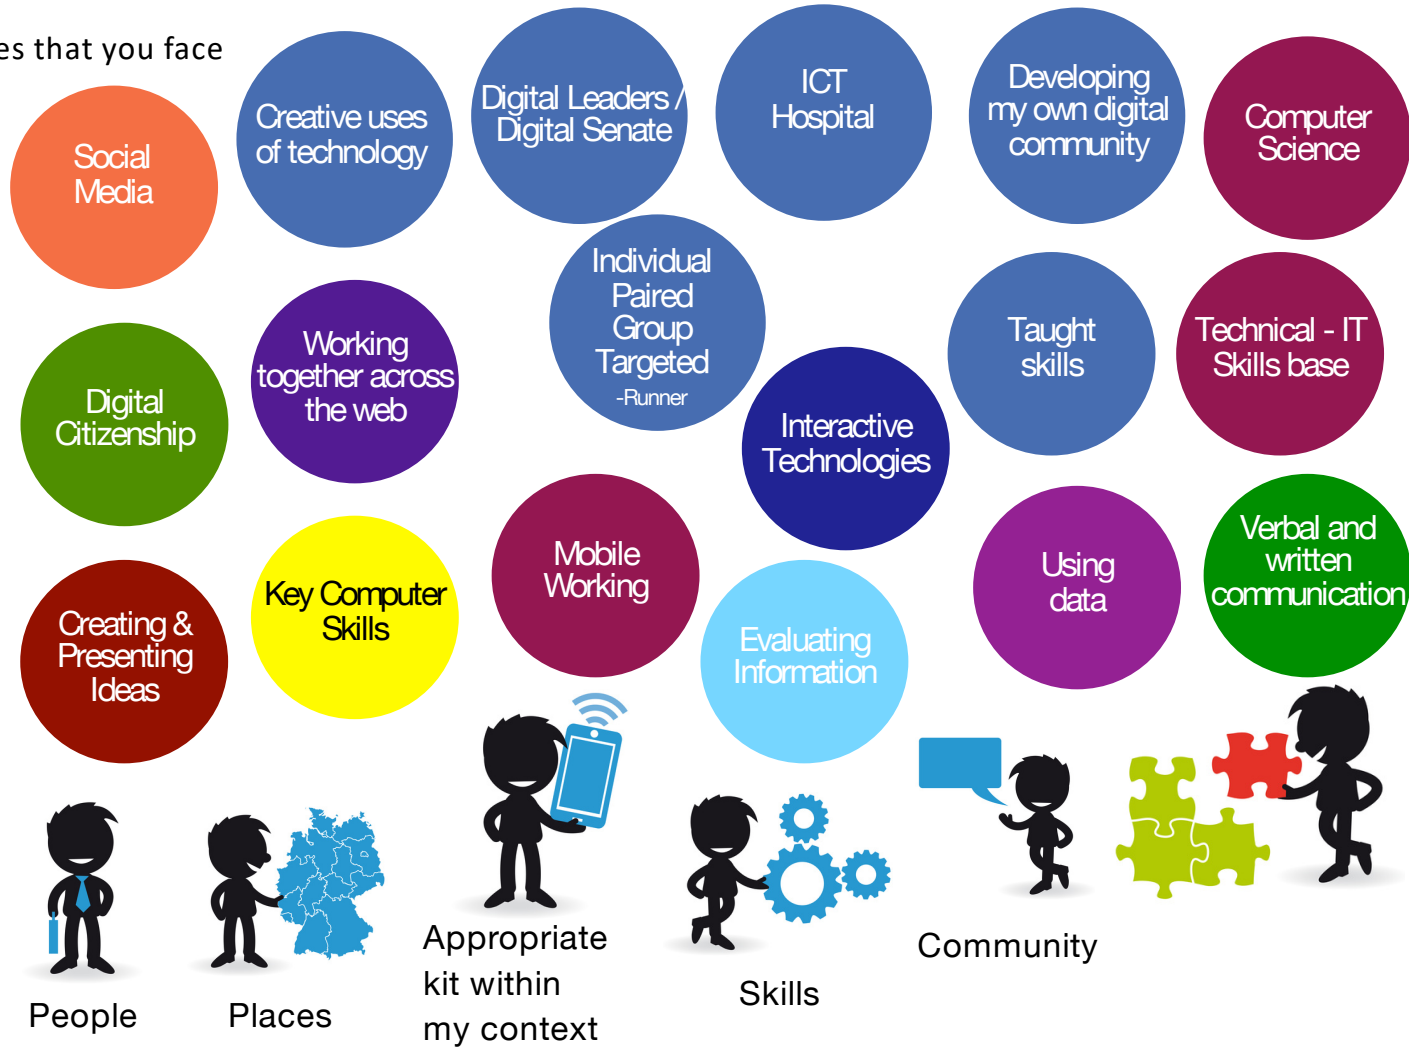

Breadth of study – KS1

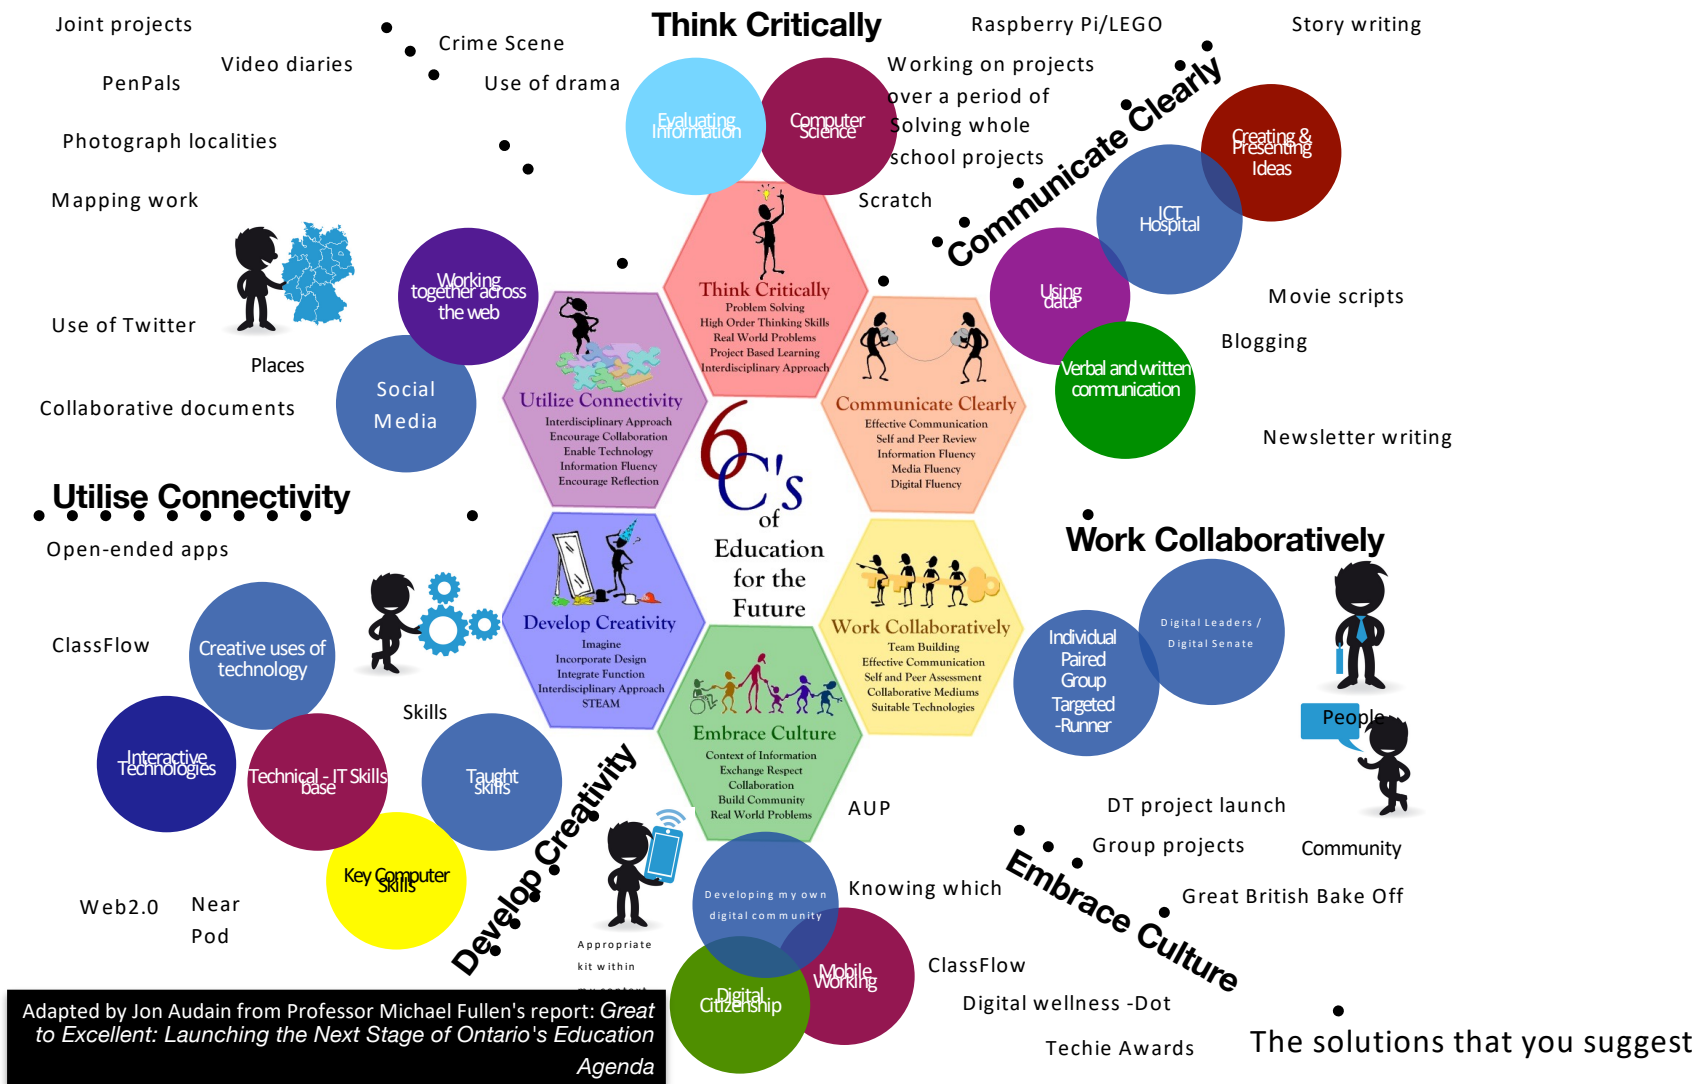

5 During the key stage, pupils should be taught the **Knowledge, skills and understanding** through:
1.a working with a range of information to investigate the different ways it can
2.be presented [for example, information about the Sun presented as a poem,
3.picture or sound pattern]
4.b exploring a variety of ICT tools [for example, floor turtle, word processing
5.software, adventure game]
6.c talking about the uses of ICT inside and outside school.

Breadth of study – KS2

5 During the key stage, pupils should be taught the **Knowledge, skills and understanding** through:
1.a working with a range of information to consider its characteristics and
2.purposes [for example, collecting factual data from the internet and a class survey to compare the findings]
4.b working with others to explore a variety of information sources and ICT tools [for example, searching the internet for information about a different part of the world, designing textile patterns using graphics software, using ICT tools to capture and change sounds]
5.c investigating and comparing the uses of ICT inside and outside school.

The challenges that you face
