

## Digital Wisdom, Social Informatics and Computer Science

### Allison Allen

In order to be effective, safe and knowledgeable citizens, learners should be able to wisely choose and use tools appropriately for effective communication of ideas, finding information or solving problems. Having a high level of “Digital Wisdom” including use of technology to access cognitive power beyond our innate capacity, as well as prudent use to enhance capabilities, results in interesting, creative and productive decisions about using technology. The ICT report ‘*Connect, Collaborate, Change*’ shows the greatest area of potential is for ICT to create new behaviours or systems: Pupils taking good ideas to a scale that fundamentally alters the way we live.
